CYBERSECURITY CONCERNS

As a business owner, you hear news stories every day about cyberattacks that are plaguing companies large and small. Small businesses are at even greater risk due to a lack of resources and expertise when it comes to securing their data and systems. Recent statistics show that 70% of small businesses experienced a cyberattack in 2017. As news of hacking, ransomware, and data breaches increases, you may have found yourself wondering:

1. Have we identified all the types of sensitive data in our organization, and do we have an inventory of where that data resides?
2. How well-protected is our high-value and sensitive information? Are we meeting the regulatory requirements for the protection of that data?
3. How quickly would we know if we had a security breach, and do we have a response plan?
4. Do we have adequate resources to assess and manage our cybersecurity risk?

If you are not comfortable with the answers to these questions, or if you have customers and vendors who are asking these questions about your organization, Olsen Thielen would like to help.

Our cybersecurity practice can help you identify, measure, and manage cybersecurity risks so you can gain confidence and make well-informed decisions about how best to address those risks.
